JAMES B. WILSON

For some people seeing an expression in symbols does a better job than words. For example:

begin equation 1

 null space of:

begin matrix   1 next 1, next 2,end row 2 next 2, next 4,   end matrix

=   the set of: a times

begin   matrix   1   end row   0   end row   minus , the fraction,

1, divided by, 2, end fraction,   end matrix

 plus b, times

begin matrix   1 end row   minus 1, end row 0 end matrix

: a comma b, in bold R   end of set

end equation 1

But if you cannot see the expression or make out the symbols then you might prefer the words.
